College of Ocean Science and Resource	Global environmental change (GEC) is the cascading effects of global warming, ocean acidification, and anthropogenic influences that have a profound impact on the life and survival of human being. In the ocean, GEC has vigorously disrupted the operation of the marine ecosystem, including the significant declines of the absorption capacity of carbon dioxide and the abundance of marine resource. Hence, the impacts of GEC on the marine ecosystem is crucial and changeling for the sustainable development of humanity. In this regard, we aim to build up the scientific knowledge base, develop the novel technology, and promote the innovative company for the mitigation and adaptation of the impacts of GEC on the marine ecosystem. In our doctoral degree program in ocean resource and environmental changes, students are expected to develop the professional skills to perform interdisciplinary research with particular emphasis on marine environment, marine resource, and marine affair.
